1. SAFETY

The practices described in this manual can be taken as guidelines for operating safely in many conditions and in addition to the safety standards that are current and enforceable in your area or region.

Your safety and the safety of third parties is the result of putting into practice your knowledge of the correct operational procedures.

Attention, when performing the work described in these instructions, always work safely and use the personal protection elements required to minimize or avoid injury. Always wear:

HARD HAT

SAFETY GLASSES

EAR PROTECTION

STEEL TOED BOOTS

PROTECTION GLOVES

To avoid eye injury, always wear safety goggles or a protective mask when using any equipment, hammer or similar tool. When equipment is under pressure or when objects are struck, chips or other debris can be thrown out. Make sure no one gets hurt by the debris that is fired before applying pressure or hitting an object. Wear eye protection that complies with ANSI Z87.1 and OSHA standards. Also wear hearing protection and gloves.

Lifting a heavy object can cause serious or fatal injury. DO NOT exceed the maximum rated capacity of lifting and positioning devices: Stay away from the area under a suspended load.

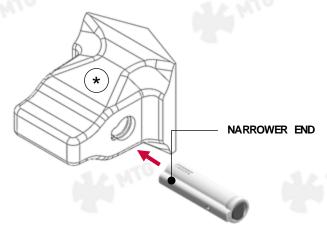

Make sure that the chain is not damaged and that the load is always balanced.

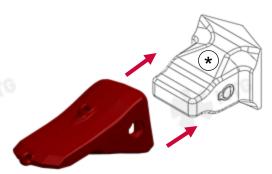

2. INSTALLATION PROCEDURE

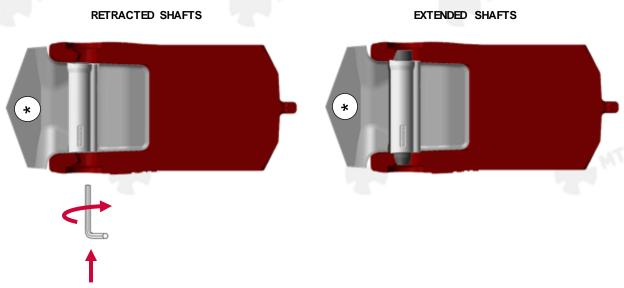

2.1 Insert the pin into its housing in the nose by its narrower end on either of the 2 sides. Make sure the 2 pin shafts are retracted.

2.2 Insert the tooth into the nose with the help of the lifting lug and a crane.

Extend the shafts by turning the bolt clockwise with a 14mm (9/16") hex head wrench for pin size 30 and 3/4" (19mm) for size 45. The rotational movement of the bolt will protrude the shaft on one of the sides and when it reaches its maximum extension, the one on the opposite side will begin to protrude.

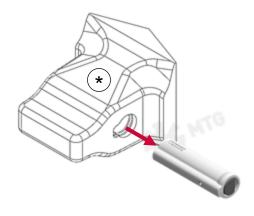

3. REMOVAL PROCEDURE

Retract the shafts by turning the bolt counterclockwise with a 14mm (9/16") hex head wrench for pin size 30 and 3/4" (19mm) for size 45. The rotational movement of the bolt will retract the shaft on one side and when fully retracted the shaft on the opposite side will begin to retract.

3.3 Extract the pin and check if it is in good conditions to be used again or if it should be replaced.

Service Instructions
